SPECTRACOM ANNOUNCES INTERNATIONAL INITIATIVE

ROCHESTER, NEW YORK, November 2, 2005 — Spectracom Corporation announced today the formation of a new International Sales division. The new division will focus on meeting the needs of customers outside of the continental United States and Canada. The company reports that international markets make up a substantial portion of the overall time and frequency industry. This initiative is an integral component of the company's strategy to broaden its base and serve next-generation network customers. To support this initiative, the company has appointed industry veteran Ilan Havered as Vice President, International Sales. Mr. Havered has served in executive sales positions at Datum Corporation and, most recently, with Symmetricom.

Spectracom's President and CEO Lisa Withers said, "We are very pleased to have Ilan join us at this important juncture of organizational growth and expansion of our product portfolio. We believe that the combination of Ilan's deep understanding of international business and strong technical background will be a terrific asset to both our customers and the company."

The International Sales team will be based in Glendale, California, with support staff from Spectracom's headquarters in Rochester and its Austin, Texas-based Telecom division.

"I am delighted to join Spectracom," said Mr. Havered. "This is a team dedicated to supporting the customer and focusing on innovative technology. I look forward to working with new channel partners to introduce our products to the international marketplace."

About Spectracom Corporation
